Feature: Profile Engagement & Recognition System

Submitted by: AgustínCMP (Lena)

---

1. Executive Summary

This proposal introduces a **Profile Engagement & Recognition System** designed to increase user interaction, retention, and monetization within Discord's ecosystem.

The feature enables users to **react to profiles with a positive interaction ("Wow!")**, allowing profile creators to accumulate recognition points over time. These points unlock **exclusive cosmetic rewards, badges, and enhanced profile customization options**.

The system is designed as a **universal feature available to all users**, with optional enhancements for Nitro subscribers.

---

2. Objectives

Primary Goals

- Increase **daily user engagement**
- Encourage **profile customization and creativity**
- Drive **social interaction beyond messaging**

- Enhance **user retention**

Secondary Goals

- Strengthen **Nitro value proposition**
- Introduce **new cosmetic reward loops**
- Create **non-intrusive gamification**

---

3. Feature Overview

3.1 Universal Profile Reaction System

A new interactive element will be added to all user profiles:

Reaction Type:

- ⭐ **“Wow!” (Positive Only Reaction)**

Key Characteristics:

- Available to **all users by default**
- Users can react once per day (configurable)
- Reaction count is publicly visible on profiles
- No negative reactions (to prevent toxicity)

3.2 Recognition Points System

Each “Wow!” contributes to a user’s **Profile Recognition Score**.

Progression Milestones:

- **10000 Wow!** → Profile Starter
- **15000 Wow!** → Profile Builder
- **20000 Wow!** → Elite Badge: *“Profile Magician”*

This creates a **long-term progression loop** accessible to every user.

** The progression numbers/milestones are just as example

3.3 Badge System

As you can see exclusive badges are granted based on milestones

Badges are:

- Displayed on user profiles
- Permanent achievements
- Non-transferable

3.4 Cosmetic Rewards System

Users unlock **cosmetic enhancements** through engagement:

- Animated profile frames
- The option to add a background to your profile
- Unique background effect (perhaps)
- Special color gradients
- Profile particle effects
- Exclusive UI themes
- Big ETCETERA (it depends on the designers)

These rewards:

- Are available to all users through progression
- Preserve monetization integrity
- Encourage continuous engagement

3.5 Nitro Integration (Enhancement Layer)

Nitro is designed to **enhance—not gate—the system**.

Key Principle:

> Participation is universal. Enhancement is premium.

Possible Nitro Benefits:

- Animated “Wow!” reactions
- Increased profile visibility
- Access to premium tiers

- Exclusive visual effects and styles
- Optional engagement boosts (e.g., featured profiles)

This ensures:

- Fair access for all users
- Increased value perception for Nitro

---

4. Accessibility & Availability

The **Profile Engagement & Recognition System is available to all Discord users by default**.

- No subscription is required to:
    - React to profiles
    - Receive reactions
    - Earn badges
    - Progress through the system

Nitro subscribers receive **enhanced features and visual upgrades**, but **core functionality remains fully accessible to the entire user base**.

---

5. User Experience Flow

1. User visits a profile
2. User clicks “Wow!”
3. Reaction is added to profile count
4. Profile owner progresses toward milestones
5. Rewards unlock automatically upon reaching thresholds

---

6. Anti-Abuse & Fair Use System

To maintain system integrity:

Safeguards:

- Daily reaction limits per user
- Bot detection systems
- Anti-multi-account validation
- Rate limiting per device/IP
- Trust-based weighting mechanisms

---

7. Benefits

7.1 For Users

- Increased visibility and recognition
- Motivation to improve profile design
- Clear progression and achievements
- Stronger sense of identity

7.2 For Discord

- Increased engagement time
- Higher interaction rates across profiles
- Broader feature adoption (all users)
- Strengthened Nitro ecosystem
- New monetization opportunities

---

8. Risks & Mitigation

Risk: Artificial Inflation (Bots / Fake Engagement)

Mitigation:

- Detection algorithms
- Reaction limits
- Trust scoring systems

Risk: Social Comparison Pressure

Mitigation:

- Positive-only reactions
- No public negative feedback

Risk: Feature Misinterpretation as Paywalled

Mitigation:

- Clear communication: system is free for all users
- Nitro positioned as enhancement only

---

9. Possible success metrics (KPIs)

- Increase in profile visits (%)
- Increase in session duration
- Daily reaction volume
- Profile customization rate
- User retention metrics
- Nitro conversion impact

---

10. Conclusion

The **Profile Engagement & Recognition System** is a scalable, inclusive feature that enhances Discord's core strengths: identity, creativity, and community interaction.

By making the system **accessible to all users while offering premium enhancements through Nitro**, Discord can:

- Maximize engagement across its entire user base
- Maintain a fair and positive user experience
- Strengthen monetization without restricting access

This proposal represents a balanced approach between **accessibility, engagement, and revenue growth**, positioning it as a high-impact addition to the platform.
